THE POST OFFICE IS BURGLARIZED

A correspondent in Marion, Ohio, writes to the Ohio Postmaster General, urging the prompt return of the Post Office at Marion.

In Marion, Ohio, on October 3, 1914, a burglar entered the Post Office and carried off a large amount of money and mail.

The burglar entered the Post Office through the rear window, using a crowbar to force the lock. He then entered the office and made off with the money and mail.

The Postmaster General has been notified and is investigating the matter.

For further information, contact the Postmaster General in Washington, D.C.

GEOLOGY AND THE FLOOD
BY G. FREDERICK WHITE, A.M., B.D., F.G.S.
(Ortner, author of "The Ice Age," "A Study of America," "Man and his Ritual Life," etc.)

The title represents the ingenious theory of the great deluge, which has been accepted by a large number of others, and is part of the explanation of the prehistoric life of man. It is based on the idea that the surface of the earth was laid bare by the waters of an immense ocean, and that the flood lasted for several months, during which time the animals and plants were destroyed.

The flood left behind it a vast deposit of mud, which was subsequently converted into clay and other minerals. This deposit is known as the "Great Flood Clay," and is still visible in many parts of the world. It is particularly abundant in the Southern States, and is a valuable source of iron, copper, and other metallic ores.

The flood also left behind it a vast deposit of coal, which is still visible in many parts of the world. It is particularly abundant in the Northern States, and is a valuable source of fuel. It is also used in the manufacture of paper and other products.

The flood also left behind it a vast deposit of oil, which is still visible in many parts of the world. It is particularly abundant in the Western States, and is a valuable source of fuel and other products.

The flood also left behind it a vast deposit of salt, which is still visible in many parts of the world. It is particularly abundant in the Southern States, and is a valuable source of food and other products.

The flood also left behind it a vast deposit of gold, which is still visible in many parts of the world. It is particularly abundant in the Western States, and is a valuable source of wealth.

The flood also left behind it a vast deposit of iron, which is still visible in many parts of the world. It is particularly abundant in the Northern States, and is a valuable source of iron.

The flood also left behind it a vast deposit of silver, which is still visible in many parts of the world. It is particularly abundant in the Western States, and is a valuable source of wealth.

The flood also left behind it a vast deposit of copper, which is still visible in many parts of the world. It is particularly abundant in the Northern States, and is a valuable source of copper.

The flood also left behind it a vast deposit of lead, which is still visible in many parts of the world. It is particularly abundant in the Western States, and is a valuable source of lead.

The flood also left behind it a vast deposit of zinc, which is still visible in many parts of the world. It is particularly abundant in the Western States, and is a valuable source of zinc.

The flood also left behind it a vast deposit of tin, which is still visible in many parts of the world. It is particularly abundant in the Western States, and is a valuable source of tin.

The flood also left behind it a vast deposit of tungsten, which is still visible in many parts of the world. It is particularly abundant in the Western States, and is a valuable source of tungsten.

The flood also left behind it a vast deposit of wolfram, which is still visible in many parts of the world. It is particularly abundant in the Western States, and is a valuable source of wolfram.

The flood also left behind it a vast deposit of uranium, which is still visible in many parts of the world. It is particularly abundant in the Western States, and is a valuable source of uranium.

The flood also left behind it a vast deposit of neptunium, which is still visible in many parts of the world. It is particularly abundant in the Western States, and is a valuable source of neptunium.

The flood also left behind it a vast deposit of plutonium, which is still visible in many parts of the world. It is particularly abundant in the Western States, and is a valuable source of plutonium.

The flood also left behind it a vast deposit of americium, which is still visible in many parts of the world. It is particularly abundant in the Western States, and is a valuable source of americium.

The flood also left behind it a vast deposit of curium, which is still visible in many parts of the world. It is particularly abundant in the Western States, and is a valuable source of curium.
