In his message, Gompers said:

To the Workers:

"Our Republic now finds it necessary to ask Americans to do a still greater work than they have already done to maintain, to defend the base of democratic government established by the blood of our fathers.

"And you, each and every man, woman, and child of the Republic, have an opportunity to participate in the building of a new world, in which our forefathers were the first to lay the foundation, and in which all men and all nations shall contribute their share in accord with their means. It is a marvelous opportunity, which is the privilege of every American, to play a part in the页

His Worst Foe Is BEHIND Him!

As that American boy goes across "no man's land," he knows what is before him. He knew before he sailed. He's trained for it—ready for it—eager for it. He can fight the Hun—that's what he's there for.

But he can't fight the slacker at home, who nurses his money, who sits supinely by and sees his country's soldiers slaughtered for lack of military supplies; who prefers greenbacks to glory, dollars to victory.

That soldier's worst foe is behind him—right here in America. Are you going to betray that boy? He's bone of your bone, blood of your blood; he's fighting for you—for the peace of your fireside, the chastity of your women, the lives of your children, the honor of your flag! Are you going to betray him? That's just what you do, when you withhold the money without which he cannot be furnished the fighting material he needs. You betray him.

HEROES OF THE TRANSPORT SERVICE

For up on the two men, exciting back and forth across the ship in great ease, were the first of the exciting new inventions of the modern age. They had been designed to give the men a chance to exercise their bodies and minds while they were at sea. In a past hour at the foot of such a machine, they could expect to get the equivalent of ten miles of normal exercise. And as a result, the atmosphere around the ship was filled with a sense of excitement and adventure.

The machines were shaped to resemble various objects, such as a violin, a guitar, or a drum. Each one had its own unique sound, which could be controlled by the user. The machine itself was a small, portable unit that could be easily carried around, and it was powered by a battery. The user simply had to hold the instrument and press a button to start the music.

There were some criticisms of the machine, however. Some people felt that it was too distracting for the crew, and that it could interfere with their work. Others argued that it was too expensive, and that it would be a waste of money. However, the majority of the crew loved the machine, and many of them spent hours playing it every day.

In conclusion, the machine was a great success. It not only helped to keep the crew healthy and happy, but it also helped to improve their morale and productivity. It was a small, but important step towards creating a more enjoyable and efficient environment on board the ship.
