MRS. GUY LAMB WINS THE DODGE

Mrs. D. O. Carnahan a Close
Second Mrs. Fred Brown
Second.

How They stood

Mrs. Addie Lamb	10,195,000
Mrs. D. O. Carnahan	9,552,500
Mrs. Fred Brown	3,709,500
Miss Vera Young	3,097,500
Miss Leaffa Wilborn	2,387,000
Miss Ellen Travis	1,612,500
Miss Melba Cannan	1,425,000
Miss Gladys Franks	1,212,500
Miss Edna Morgan	980,000
Miss Loretta Easley	830,000
Miss Atrell Vaughn	722,000
Miss Nannie Moore	212,500

A complete story of the ending of the contest will be in our next issue.

A CIRCUIT WALKER

In the days of Peter Cartwright, and other undaunted pioneers of Methodism, "Circuit Walkers," though designated on the Conference books as "Circuit Riders," were very common in some portions of the country. These ministers, of course, wished to make the records appear right on the books and to prevent the word "circuit rider" from becoming a misnomer, so they usually designated their mode of journeying around their circuit as riding Shank's filly.

In these modern days the universal use of the horse and the multiplicity of buggies, carriages and automobiles, it is rare indeed that we find a minister who takes it about around his circuit. However, Rev. J. W. Crowe who has just left the Tolu circuit for another appointment, prefers the latter mode of travel. Preaching at one church at 11 o'clock, the good brother "hoofs it" on to the next church several miles away for an afternoon or evening appointment. The good people of the Tolu circuit offered to furnish the pastor with a horse, buggy or auto, but to no effect. The Rev. J. W. Crowe is a strong preacher and one of the noted revivalists of the Louisville Conference.

Entertainment and pie supper at Baker's School House, Friday night, October 1, Box of candy to prettiest girl.

REV. SHORT TRANSFERRED TO PAINTSVILLE

Rev. Harry R. Short, four years pastor of the Methodist Church, South, of this city, preached his closing sermon as pastor of that church Sunday evening to a large audience. Loved by the members of his own church, Rev. Short is also admired by other people of the town, and there is general regret that he leaves for a new field of labor.

Since his incumbency as its pastor, the church here has been built up

and the membership greatly increased. Mrs. Short has also been popular and a great worker in church circles. Rev. and Mrs. Short left Tuesday for Paintsville, in this state, their new home. Their many friends wish them much success in their new field. Transferring from the Louisville Conference, which includes a portion of Eastern Kentucky, Rev. Short was assigned to the Paintsville work, which is one of the best in that Conference.

NOTICE

To the Sunday schools of Crittenden county. Our State Convention will meet at Louisville October 5, 6 and 7. Each Sunday school should send at least one delegate—more if possible.

Let all Sunday schools send full report at once to Miss Ruth Hill, our County Secretary.

E. F. DEAN, Pres.

HURRICANE TABERNACLE DESTROYED BY FIRE

Saturday morning the tabernacle at Hurricane, also the church building at that place, were completely destroyed by fire. How the fire originated is unknown, but it is thought by many to have been the work of an incendiary.

The blaze first broke out in the upper, or south side of the tabernacle, at about nine o'clock. So far as is known the fire was first seen by Miss Kirk, teacher of the Barnett school, and another lady teacher, who had come early to attend a school fair advertised to be held on that day.

These young ladies, who were seated in a buggy down by the gate some distance from the tabernacle, on discovering the fire ran to the church and rang the bell. As they ran toward the building, it is reported the young ladies saw a man unknown to them going up from the south side of the tabernacle and disappear behind the row of camps which surround the building. The tabernacle was soon a mass of flames and a strong south wind carried the fire to the church and that building was also burned to the ground.

Hurricane church was one of the oldest in the county, having been organized in 1848. The land on which the log building was erected was deeded to the church by Robert H. Haynes and Richard Minner and the church organization was made at the home of Mr. Haynes. The church building that was burned Saturday was about 37 years old, its first pastor being Rev. R. Y. Thomas. The tabernacle was erected about ten years later—about 27 years ago—for the purpose of holding camp meetings. Since that time camp meetings have been held annually.

The membership at Hurricane, together with the camp meeting committee, have agreed that a new church building and tabernacle must be erected on the site of the old buildings.

GOES TO SCOTLAND

Rev. Marion Uri Conditt, who has recently been granted license to preach the Gospel by the Council of the Southern Presbyterian church, preached his initial sermon at the First Presbyterian church of this city Wednesday evening. Mr. Conditt recently won a fellowship in a Theological university in Scotland. He will leave this week to take up his studies there. He is a son of Mr. and Mrs. W. G. Conditt, of this county.

DIES AT PADUCAH

Al Daughtrey, 45 years old, son of Mr. and Mrs. George Daughtrey, of the Caldwell Springs section, and nephew of Jerry D. Daughtrey, of this city, died at his home in Paducah Wednesday. His remains were brought to this county for burial and interred in the Chapel Hill cemetery. He leaves a wife and a number of children.

NATIONAL BALLOON RACE

Two or more balloons, it is reported, were seen passing over this city Sunday. According to a slip of paper picked up and supposed to have been dropped from one of the fliers, one of the balloons was the "Little Rock," that left Birmingham, Ala., Saturday in the National Balloon race. The paper was signed by the Birmingham Age-Herald. Another race will start from Birmingham on Oct. 23.

GEORGE WITHERSPOON DEAD

The remains of George Witherspoon, who formerly resided in this county, and later made his home in Texas and who died Saturday in a Louisville sanitarium, were brought here for burial Monday and interred in the Marion cemetery.

The Witherspoons—the families of two brothers, Hiram and Uri—were among the early settlers of Crittenden county.

NEW MAN ON THE JOB

We have secured the service of R. C. Haynes as an addition on the news staff of the Press, beginning this week. Mr. Haynes is an old hand at the business and anything in the shape of news rarely escapes him. Our readers are familiar with his writings and will doubtless appreciate his addition to our force. His "Historical Sketches" will be continued from time to time.

A NEW SPAR MINE

In the Blooming Rose neighborhood, in this county, on the Pritchett farm, Mr. W. A. Farley has opened up a new spar mine which promises to measure up favorably with the mines of Crittenden county.

MARION HIGH SCHOOL GOES TO MORGANFIELD

On Saturday, October 2, Marion High School goes to Morganfield for the first football game and the first basketball game of the season. The football team is a good one and will win games, in fact will win most of the games it plays—perhaps all the games. At least it is going to "Play Ball" this year and play to win. The basketball team is there, too, full of determination to carry off a game every time the football team does.

COURIER BARGAIN RATES

Among the bits of good news these days is the announcement of The Evansville Courier that during the month of October it has reduced the price of the daily Courier for one year to \$5. This should result in a largely increased subscription list. October is the great subscription month for the Courier and our folks will be busy sending in their subscriptions.

BLACKFORD

Mrs. Gertrude Hodge of Dekoven spent Tuesday with Mrs. U. G. Dillard.

Mr. and Mrs. Marshall Lansdale were in Evansville one day last week.

Mr. and Mrs. O. M. Crisp and son spent the week end the guests of his parents, Mr. and Mrs. A. B. Crisp.

Mr. and Mrs. Will Sullivan, Mrs. Jennie Griffon and Mr. John Sullivan of Providence were in town Tuesday.

Miss Sadie Eddings and Mr. C. McCarthy visited Miss Lola Eddings Sunday.

Miss Zora Crowell of Providence, visited relatives here last week. Misses Eva Eskew and Agnes Winters of Weston, spent Saturday the guests of Miss Lillian Bennett.

Mr. and Mrs. W. D. Pickens moved to Marion last week.

Mr. and Mrs. Hughie Crowell of Dekoven are visiting relatives here.

Mrs. E. A. Bennett and daughter spent one day last week with her brother, Mr. John Green of Sturgis.

Mr. C. H. Dillard of Weston spent Saturday night the guest of Mr. C. L. Cain.

Mrs. Estel Becket of Akron Ohio, spent last week with her mother, Mrs. Nona Turpin.

Mr. Porter Spickard of Crider spent Sunday the guest of Mr. Seaf Sullivan.

Mr. A. D. Robards and family moved from Uniontown to Blackford last week.

Mr. Carl Eddings of Jenkins is visiting his mother, Mrs. Belle Eddings.

Miss Mina White spent the week end in Clay.

Mr. and Mrs. Kirby Crowell of Morganfield spent Sunday here.

Mr. H. L. Lamb is planning to build a new bungalow opposite the bank building.

Mr. and Mrs. R. B. Morgan of Wheatcroft were in town Sunday.

Mr. John White left Monday for Union City, Tenn.

Mrs. Al Pickens has been visiting friends in Princeton.

Mrs. J. E. White spent Sunday in Marion.

LEVIAS.

Born to Cecil LaRue and wife Sunday a fine girl.

Aunt Mary Franklin has returned from Tolu where she visited her son, John and wife.

Mrs. Dora Snyder of Tolu is visiting relatives here.

Our annual protracted meeting will commence at Union next Saturday. Rev. Simpson of Clay will assist our pastor, Rev. T. C. Carter.

Mrs. Lena Franklin visited relatives at Marion last week.

J. H. Price and wife were week end guests of relatives at Marion and attended services at the First Baptist Church Sunday.

Mrs. Eva Eaton spent Wednesday at Levas the guest of Mrs. L. L. Price and daughters.

Mrs. J. B. Carter is visiting her daughter, Mrs. Catherine Wolfe at Winchester, Ky.

FOR SALE 1 James

"CIRCUS DAY"

Is there a day more joyful? Is there a day when the children are more happy and gleeful? Is there a day when the old folks forget their dull cares, of life and sweet memories of childhood days return again? The days when they as little ones use to delight in carrying water for the Elephants and feeding the Monkeys peanuts, as "Circus Day".

Such a day will be in Marion, Monday October 4th when the Campbell-Bailey-Hutchinson Combined Circus, Menagerie and Wild West show comes to Marion Monday October 4, pitches its tents, gives a free street parade at noon and two performances, afternoon and night at 2 and 8 P. M.

This Circus comes with a reputation for cleanliness; most modern and of having some of the very best animal acts and Circus and Wild West performers of their profession, and no doubt there will be a large crowd in Marion, Monday October 4, which is "Circus Day."

BUGGY OVERTURNED

While Mr. and Mrs. Sam Asher of the Hoods section in this county, were out driving Friday the buggy in which they rode was overrun by another vehicle and the buggy overturned. Mrs. Asher had both wrists broken and was otherwise painfully injured. Mr. Asher escaped unhurt.

BIG REVIVAL CLOSES

A very successful religious revival at the Shady Grove Baptist church, conducted by Rev. H. C. Lily of Carrsville, and the pastor, Rev. H. A. Egbert, has just closed after two weeks duration. Twenty-seven conversions and many additions to the church are reported.

NEW MINISTER CALLED

Rev. W. P. Meroney, of Louisville has been called as pastor of the First Baptist Church of this city, preaching his first sermon here Sunday afternoon to a large congregation. He takes the place of Rev. J. B. Trotter, who resigned to accept the pastorate of a church at Elizabethtown, in this state.

SHILOH.

Rev. Crowe and wife visited at the home of Mr. H. L. Lynn Sunday night.

Mr. Andy Cooper was in Marion Monday on business.

Mr. Alvin Walker, wife and daughter, Jewell, visited Mrs. Henry Lynn Sunday.

Reginald Lynn left for Louisville Wednesday, he was accompanied by Princeton by Mrs. Florence Harpending and Misses Ruth and Clement Lynn.

Mr. J. Doss was the guest one night last week of his sister-in-law, Mrs. Martha Franks.

Mr. and Mrs. Robert Hughes are the proud parents of a baby boy.

Mr. and Mrs. W. C. Lynn and son, Onyel were in Marion Saturday.

Mr. and Mrs. Mont Morrill and son, Trice Eugene were the guests Sunday of Mr. and Mrs. Homer Settles.

Mr. and Mrs. Fred Love and children of Levas were he guests of Homer Settles Sunday.

Mr. Lucian York and wife and Mrs. Eliza Sullenger motored to Tolu recently.

Miss Josie Davidson, Iva Clemens and Ella Conger visited Mrs. Ruth Hughes one day last week.

SHADY GROVE

Bill Stone of Repton was guest of Carl Horning Saturday and Sunday.

Mr. Davis Hollowell of Akron is at home for a few days.

A. F. Easley and son, Lexie and Carl Horning were at Providence and Clay Tuesday.

M. O. Eskew of Marion was here Sunday.

Messrs. R. C. and D. H. Hollowell were in Providence Tuesday.

Robert Hardrick was in Providence Tuesday.

Roy McDowell left Monday for Elkton.

Rev. T. C. Lilly and Messrs. D. H. Hollowell and A. L. Easley were in Salem Wednesday.

Alvin Richt, who was formerly a teacher in this county, was in the city two days of this week visiting friends.

To Our Subscribers

The print paper in a bad shape. We have paper on hand for the no relief in sight. There size we use in the market

We feel that it is the conserve our supply by issuing paper a week until the paper can fill our orders.

FALLS DOWN STAIRS

Miss Lavine Guess, 17-year-old daughter of Eh Guess, and a pupil of the Marion High School, fell down a flight of stairs in the school building Tuesday and was painfully bruised, though not seriously injured. Mr. Guess was called and took his daughter home, where she will soon recover.

AFTER TWO

Noah Jones, of Marion, after an absence of twenty-six years from the land of his nativity, is mingling with his numerous friends in town and country, being the of his three brothers-in-law, Walter and Robert Enoch. Mr. Jones was formerly a Crittenden county pedagogue.

Selling Under Disadvantages-- BUT SELLING!

Our fixtures have not yet arrived. Therefore, we are not able to properly show you what we have, but we are now open for business and will do our best to serve you.

Our line is almost complete—from a collar button to a suit or overcoat for men or boys.

A Word to the Good Dresser--

We now have the Clothing, Hats, Caps, Shoes, Collars, Ties, Underwear, Socks, Belts, Suspenders, that you formerly had to go to the city to find.

We do not propose to carry a general line, but we expect to concentrate ourselves solely upon the clothing and furnishing needs of men, young men and boys. By doing this we can assure our customers the satisfaction of knowing they are getting merchandise that is meant for them.

We propose to please the most fastidious dressers.

We shall never be known as a "price-cutting" store, as we have but one price to all and NOT all prices to one.

Watch for the announcement of our formal opening.

Carlisle St.

Who Will Be Our Next President?

The 8000 Rexall Drug Stores of the United States are going to tell you. From Sept. 15 to 24, The Rexall store will take a straw vote for both men and women.

Four years ago we took a straw vote in which a million votes were cast, and the result showed Wilson would win by a small majority. Even in California and New Hampshire when compared with the actual ballots cast in November the Rexall vote differed less than one half of one per cent.

No other organization has the machinery to do this. Every city and town of any size in the United States has its Rexall Store. Come in and cast your ballot. Every day the results are sent to the state chairman and wired to Boston, and the tabulation mailed back to us at once.

If you will cast your vote at our store we will tell you about October 15 who will be our next President.

HAYNES & TAYLOR

The Rexall

Your Grain, Buildings and Implements

All mean dollars to you. It would cost a much greater sum now to replace them. Guard them carefully. Think of what a loss it would be to you if a Fire or a Tornado swept your farm. Protect yourself against such a loss. A good Farm Insurance policy will protect you. It will promptly pay all loss by fire, tornado, hail or lightning. We are Hartford agents.

NORTH SIDE SQUARE

DAIRY POINTS

ME SUPPLIES FROM FARM
Insured in Money Value Dairy Products
Constitute Most Important Group of Foods.

Dairy products constitute the most important group of foods measured in money value, consumed by the average farm family. Milk cows are kept on practically all farms. The average farm family uses annually about 2,000 quarts of milk in the form of milk, butter, cheese or cream.

In dairy regions where milk is shipped or sold to creameries or cheese

It Pays to Treat the Cow and Her Offspring Well.

factories, practically all the butter and cheese used is bought instead of made on the farm, says the United States department of agriculture. Very few farmers buy whole milk. About four-fifths of the dairy products consumed by farmers are produced on the home farm.

In the South dairy products are used very freely. The common practice is to churn the whole milk for butter, producing a large quantity of buttermilk. The average annual consumption of butter per family is about 230 pounds in the South while in the North and West it is less than 150 pounds. It is not unusual for the average-sized family in the South to consume 2,000 quarts of buttermilk a year. Buttermilk is a cooling and healthful drink for that climate.

DRUGS INJURE DAIRY CATTLE

Iowa State College Experiments Show Decrease Rather Than Increase in Fat Production.

The use of drugs with the idea of increasing the fat production of test cows has been tried out by Iowa State College dairy section. In most cases it was found that drugs decreased rather than increased the fat production.

Such drugs as alcohol, castor oil, pituitrin, aloes, magnesium sulphate, nux vomica and sodium chloride were tried and in all cases they were detrimental to the cows. All cows used were in good normal condition at the start of the tests and various sizes of doses were used.

In some cases it was found that the flow of milk and butterfat was increased slightly but this soon fell off and in the end a decrease was noticed.

Up to date no drug has been found that will increase and it is strongly advised by the dairy men not to resort to this method as it injures the cows and is not a fair way to gain a record.

WHEN MILK TEST IS HIGHEST

Faculty of Milking Off Fat Is Used in Pushing Cows for Short-Time Records.

In pushing cows for short-time records, this faculty of milking off the fat is used; that is, the cow is allowed to freshen in very fat condition and will test very high when her record is being made two or four weeks after freshening. There have been cases where cows have tested from two to three per cent higher during this period than the normal test for her dryness and this test would be much higher than during the last part of her lactation.

MILK-CREAM WEIGHTS

Skin milk weighs 8.63 pounds a gallon. The foregoing figures were based on milk with a fat content of 2 1/2 per cent at 68 degrees temperature. Similar milk testing 3 per cent weighs 8.8 pounds. Mixed milk and cream of 10 per cent butterfat content weighs 8.53 pounds. The general rule is to estimate milk testing from 3 to 5 per cent as weighing 8.6 pounds a gallon.

RAISE PRODUCTION OF HERD

Permanent Advancement Can Only Be Made by Use of Purebred Bull of Good Ancestors.

The only way for everyone to have cows capable of producing a large flow of milk is by better breeding. By better breeding is meant the using of a purebred dairy bull which is a good individual from good producing ancestors. It is only through the use of a good bull that any permanent advancement can be made in the production of the future herd.

Where Bacteria Get In. Bacteria get into the milk from udders, from the body of the cow, the body of the milker and the atmosphere or air.

Jacket Cans of Milk. It pays to jacket cans of milk in transit. A half-quilt blanket is best, but a wet burlap wrapper will do.

Overlooked by Dairywomen. The possibilities of soy-bean meal and pea-meal have not had proper consideration by dairywomen.

HOW SCIENTISTS EXAMINE SOILS

Survey of Important Work of One of Branches of Department of Agriculture.

STUDIED VARIED ACTIVITIES

Bureau Took Active Part With Geological Survey in Nation-Wide Search for Deposits of Nitrates and Potash.

During the twenty years of its existence, the bureau of soils, United States department of agriculture, has studied the chemical constituents of the soils of all parts of the country. It has investigated these constituents qualitatively and quantitatively, showing their relation to one another and to plants, their solubility and permeability, and the manner of their functioning. It has studied the problem of alkali—that condition arising where soils contain an excess of soluble salts—and devised methods for measuring the content of alkali in the field and for eliminating it under field conditions. It has studied hardpans, explained the manner of their formation, and suggested the means of improving lands affected with the different sorts. These various activities have involved the making of thousands of analyses and the devising of much apparatus.

Public Given Advice and Counsel

Advice and counsel is given by the bureau to the public on all matters connected with soil chemistry. The bureau has also investigated the physical properties of soils. It has devised apparatus for measuring the temperature of soils, the movement of water and of air and other gases in soils. The absorption of water, the extent and rate of capillary action, the effect of pressure on the concentration of the nutrient solution, and on the retention of that solution in the soil, the relation of soils to erosion, and many kindred problems have been worked upon.

The bureau has also worked upon the problem of the fixation of nitrogen found in the air in its experimental factory at Arlington, much advance having been made. Carried to its logical conclusion this move will result in supplying easily all the nitrogen the country needs in agriculture and industry.

Soil surveys have been made in all the states of the union. The surveys are of two kinds: detailed surveys on the scale of one inch to the mile as

Filter Press, Used in Soil Investigations.

usually covering county units, and reconnaissance surveys much more general in character, made on scales of four to six inches to the mile and covering large areas. At the close of the last fiscal year an area of 331,487,300 acres had been surveyed in detail and 322,760,960 acres on a reconnaissance basis. These surveys involve the identification and classification of the many types of soils found in various parts of the country, a study of their agricultural value, and a determination of their relation to the various crops and systems of agriculture.

Advancement of Agriculture.

The results of the soil survey work form a basis for the logical advancement of agriculture through experimentation of scientific workers in all its varied lines.

The land classification work of the bureau is done in co-operation with the forest service and other departments of the government, and has for its purpose the exclusion, from the national reserves, of lands that are suited for agriculture.

An interesting special investigation in connection with the potash supply has to do with the extraction of this salt from the giant kelp of the Pacific coast. A fully equipped factory has been operated at Sumnerland, California, for the last two years, and thousands of dollars worth of potash has been used in the fertilizer trade or direct to farmers.

The plant will be operated during the coming fiscal year, a careful study being made of the practicability of recovering various by-products, so that the industry may be able to compete with imported potash and the kelp beds may become a permanently valuable asset of the nation.

POISON FOR CABBAGE WORMS

Insect Powder Mixed With Flour Will Be Found Satisfactory—Harmless to Humans.

Insect powder mixed with three or four times its bulk of flour and left over night in a tight container is an effective poison for the common cabbage worm. It is harmless to persons. Apply when the dew is on, using a sifting tin can or a powder blower.

HINTS FOR BUILDING ICE HOUSE FOR FARM

Erection of Structure Depends Much on Local Conditions.

Size of Building and Difficulty of Obtaining Ice Are Important Factors—Other Details Must Be Considered.

Construction of a farm ice house depends to a great extent upon local conditions, the size of the house, and the difficulty of obtaining ice. These factors help to determine the sum that may wisely be spent for such a building. Where ice is expensive or hard to obtain, a better constructed and insulated and therefore more expensive ice house is advisable. Where natural ice can be harvested and stored cheaply a cheap structure is usually satisfactory and the loss from melting ice is a small consideration.

The cost of harvesting and storing the interest on the money invested, and repairs and depreciation on the building are to be considered in relation

A Good Ice House, Well Filled, Is a Real Asset to the Modern Farmer.

tion to the ice loss from melting; and the type of house to be built depends upon these factors. It never pays to build permanently in other than a substantial manner, and careful thought should be given the matter before erecting a cheap makeshift that will not give adequate service.

Various types of ice houses, how to build them, and other phases of the subject are discussed in Farmers' Bulletin 1078, "Harvesting and Storing Ice on the Farm," which can be obtained free of charge from the United States department of agriculture.

OATS ARE ECONOMICAL CROP

Not Generally as Profitable as Some Other Grains, but Needed in Good Rotation.

It is sound farm business to sell some crops for cash. Farm management surveys have shown that the safest and soundest practice is to have about one-fifth of the total receipts on the farm come from sale of crops. The other four-fifths will come from the sale of live stock or live stock products.

The crop that can usually be sold for cash most economically is oats. Oats are not generally as profitable a crop to grow as some others, but a good rotation needs this small grain in it. It makes a very satisfactory connecting link between the corn crop and the hay crop. Corn, if sold as a cash crop, makes a larger return to the acre, but corn can usually be fed more profitably than it can be sold for cash. It is ordinarily a cheaper feed than oats. Hence, if any crop is to be sold, it should be the oats.

WEIGHTS PER BUSHEL

A bushel is regarded as a definite weight rather than a cubic measure in the estimates of production and prices made by the bureau of crop estimates. The weights which are regarded as a bushel for various products are as follows:

Wheat, 60 lbs.; corn, 56 lbs. if shelled, 70 lbs. if in ear; oats, 32 lbs.; barley, 48 lbs.; rye, 56 lbs.; buckwheat, 48 lbs.; white (Irish) potatoes, 60 lbs.; sweet potatoes, 55 lbs.; apples, 48 lbs.; pears, 48 lbs.; peaches, 48 lbs.; walnuts and hickory nuts, 50 lbs.; beans (dry), 60 lbs.; onions, 57 lbs.; turnips, 55 lbs.; clover seed, 60 lbs.; alfalfa seed, 60 lbs.; timothy seed, 45 lbs.; Kaffir corn, 50 lbs. Estimates of yields and prices in tons are always on the basis of 2,000 pounds.

TESTING SOIL FOR ACIDITY

Experiment Station Will Tell How Much Lime to Apply for Crop of Alfalfa.

It is a waste of time and money to sow alfalfa on sour soil and if you are not sure whether your soil is acid or not test it for acidity or send a sample to your experiment station and have it tested. The experiment station will not only tell you whether the soil is acid or not, but will also advise how much ground limestone to apply per acre in order to put it in good condition, for alfalfa or other legumes. The lime may be applied next winter if time does not permit of applying it this fall.

MARKET FOR SURPLUS TRUCK

Fruit and Vegetables Otherwise Wasted Can Be Sold in Small Quantities by Using Motor.

The motor truck express routes in many localities make it possible for the farmer to market his surplus fruit and vegetables in small quantities that would otherwise be wasted. When there is more than enough for canning purposes this method should not be overlooked.

Live Stock Facts

FINISH OFF FEEDERS EARLY

No Class of Cattle Yet Produced More Suitable for Market Demands Than Baby Beef.

Feeders show an increasing tendency toward finishing off their beef cattle at younger ages. In general this tendency is created by two causes: First, consumers are demanding small, high-quality cuts of meat; second, the cost of producing beef, due to advance in land values, feeds, labor and taxes, has increased to such an extent that feeders and breeders can seldom hold their cattle to advanced ages at a profit. General conditions in the past few years have indicated that no class of beef yet produced more nearly fulfills the requirements of both producer and consumer than baby beef, and the feeding of baby beef has been increasing in popularity.

In the early days of the cattle industry steers were kept on the range

Breeders Show Tendency to Finish Off Their Cattle at Younger Ages.

until from three to five years of age. The use of better bulls with consequent improvement in quality and early maturity of cattle, together with heavier grain feeding, has made it possible to put just as much flesh on the animals by the time they are from 16 to 20 months of age. With improvements in breeding and in feed lot methods heavier cattle with more quality may in time be put on the market at even a younger age. The precise age at which steers should be marketed depends upon several conditions which must be determined by the individual feeder.

CUT OFF PIGS' SHARP TUSKS

Quite Often These Teeth Lacerate Sow's Teats and She Won't Let Youngsters Suck.

Pigs are born with four sharp, hard tusks, two above and two below. Take a pair of nippers—you can find them at almost any hardware store—and cut the four sharp tusks off, not too near the gums. Quite often these tusks cut the sow's teats, make them sore and she will not let the pigs suck. Then, also, the pigs cut themselves with these tusks, and sometimes stick them through their tongue and cannot suck and starve. They often cause sore mouth. Be sure to cut them off. They are soft and easily removed. A pair of sharp scissors will do. Do not try to pull them out, but cut them off.

If you see a pig that is getting too fat, you will know it is robbing its teats. To prevent this, take a sharp knife and cut its rooster in two or three places, deep enough to make it sore, and it will stop it.

CARING FOR WEANING LAMBS

If to Be Kept for Breeding Purposes They Should Be Put in Good, Fresh Pasture.

If lambs are sold from three to five months of age they may run with their dams until that time. The lambs to be kept for breeding purposes should be weaned at the same time and put on fresh pastures where there is no danger of stomach worms. When the weaning is done at this time the ewes can be put in better condition for the fall breeding. Ram lambs left in the flock worry the ewes and may get some of them in lamb. When lambs are to be kept on the farm the best method of weaning is to leave them on the old pasture for three or four days and remove the ewes to a sandy pasture to check their milk flow. As soon as the lambs cease fretting for their dams they may be moved to fresh pastures where the ewes have not been. Ewes with large udders should be partially milked once every three days until they go dry.

ADVICE FOR GOOD BREEDERS

Interest in Nation-Wide Effort to Improve Domestic Animals Is Quite Noticeable.

Bulletins on breeding, feeding and farm management are requested to a noticeable extent by persons enrolling in the "Better Stock—Better Stock" movement. The interest in the nationwide effort to improve the quality of domestic animals and the evident desire of live-stock owners to obtain dependable information has caused experts of the United States department of agriculture to conclude that good breeders are good readers, and vice versa.

Poor Places for Sheep. Wet, swampy pastures and muddy yards are two things the sheep man should shun. They are an almost certain cause of foot-rot.

War on Tuberculosis. More attention is needed in the fight against tuberculosis among farm animals. This is a disease which is causing huge losses.

Profitable Hog. A comfortable hog is a profitable hog.

"ASPIRIN"

WARNING! Unless you see the name "Bayer" on tablets you are not getting genuine Aspirin prescribed by physicians for 20 years and proved safe by millions. Name "Bayer" has same meaning as 14 Karat on gold.

SAFETY FIRST! Accept only an "unbroken package" of genuine "Bayer Tablets of Aspirin," which contains proper directions for Headache, Earache, Toothache, Neuralgia, Colds, Rheumatism, Neuritis, Lumbago, and for pain generally. Strictly American!

Handy tin boxes of 12 tablets cost but a few cents—Larger packages. Aspirin is the trade mark of Bayer Manufacturers of Monac—Inventor of Salicylic Acid.

Domestic Tragedy.
"Henrietta," said Mr. Meekton, "you never ask me to water the rubber tree or put the cat out any more."
"It has been attended to, Leonidas."
"And you don't mind how many cigarettes I smoke nor how late I stay out at night."
"I consider you able to take care of yourself."
"Henrietta, many a home has been wrecked because of ambition and business preoccupation. You have grown to be so interested in woman suffrage I don't believe you care what becomes of me!"

Persuaded.
The flower seller and Mr. Karket engaged in conversation.
"Buy a flower, sir?"
"No, thanks."
"Buy one for your wife."
"Haven't got one."
"For your sweetheart, then."
"Haven't got one."
"Well, buy one to celebrate your good luck."
He bought.

Save Time.
"A man ought not to kiss and tell."
"Still, some summer girls don't mind if you tell a few other nice fellows who are coming down."

SOMETHING JOB NEVER DID ADMITTED HE WAS LOSER

Possibly an Experience Like Mr. Brown's Would Have Shattered His Reputation for Patience.

Filled with pride, Mr. and Mrs. Brown started out for a drive in their new motorcar. Mrs. Brown was hoping the neighbors were watching, but her husband was too busy steering to hope about anything.

"At last!" Before they reached the end of the road the car stopped, and stayed that way with a multiple persistence. Mr. Brown tried every lever and handle in turn. Then he got down from his seat and began to investigate.

Presently he lay down and crawled underneath the car until only his number nine was left visible. In a few moments the car gave a sudden jolt and then stopped, and a terrible flow of language, more forcible than polite, became audible.

"Oh, John," exclaimed the wife, in horrified tones, "don't swear so! Have patience, like Job did!"
"Job," shrieked Mr. Brown, in a stifled voice, "Job would have sworn, too, if he'd been underneath this beastly car with his mustache caught in a cogwheel."

Little boats must keep the shore, large ships may venture more.

An old eagle is better than a young sparrow.—German Proverb.

Complications.
"What was the trouble with your singing society?"
"It was a fine society," replied Jud Tunkles, "but the singing was hard to regulate. The wealthy and influential members we depended on to keep it going all happened to have poor voices."

Convinced Gentleman Preferred to Buy His Wine Rather Than Comply With Wife's Request.
Three men about town had a very good day at the races. Each vowed that he would go home and cheerfully obey the first request that his wife made him. A bottle of wine depended upon the result.

The following night they compared notes.

"My wife told me, as I slipped on the cat's sancer, to break all the china in the house, so I did," said No. 1.

"I happened accidentally to sit on the piano," said No. 2, and my wife suggested that I should utterly ruin it, so that instrument will be heard no more."

Then No. 3 spoke. "I went for the top step that was not there and fell full length," he explained, "and my wife remarked that she would be pleased to see me break my neck."

"And—" queried his companions, breathlessly.

"Oh, I am paying."

DEMOCRATIC COLUMN.

BY C. S. NUNN

Republican Justification for Poor
Markets Exploded by own Testimony

The last issue of the Press contained an article sent out by the Republican Campaign Committee undertaking to refute the charge that the tobacco market in western Kentucky has been destroyed by the failure to ratify the Peace Treaty. To sustain their position they quote a Paducah banker without naming him, to the effect that "the peace treaty did not have a darned thing to do with this tobacco market."

As everybody knows, all of the tobacco raised in western Kentucky is exported to, and used in Europe and unless the people of Europe can buy it there is no sale for it. This Paducah banker admits that "the Europeans have no money to spend on tobacco." "Italy wants tobacco bad enough, but did not have the money to buy it with." THE EXCHANGE RATE IS SO LOW THAT THEY CANNOT AFFORD TO BUY IT WITH ITALIAN MONEY ANYWAY. He gives substantially the same explanation of the market conditions in the other countries but adds that "England has on hand enough for a year and a half normal supply." So as a measure of economy, England declared an embargo January 21st against all imports of tobacco. The Republican apologist might have applied this explanation to the other European countries against which he said the low rate of exchange operated. Unless the rate of exchange is restored to prewar days so that a dollar of European money will buy an American dollar's worth of tobacco, instead of requiring from two to three dollars of their money under present conditions, not only England, but all of Europe will have enough American tobacco on hand, that is they will make their present supply suffice for several years and a half. The Paducah banker might have stated the well known fact that in England and in all European countries, tobacco is a government monopoly, and each government buys the entire national tobacco supply and resells to its people. As the Paducah banker says, the credit of all these countries is badly impaired because of the tremendous war expense and destruction. These credits cannot be repaired or restored unless the Peace Treaty is ratified. The amounts of each indemnity which Germany and Austria are obligated to pay under the Peace Treaty must be secured before credits can be restored, and before the bankers of America or any other country, will lend them money with which to buy tobacco or any other commodities. The covenant of the League of Nations is intended, among other things to operate as a guarantee or

ing is plainer than the fact that the chief obstacle to "normalcy," is we may use the word of a resident of another Marion, is the Senate's failure to ratify the Peace Treaty so that foreign credits may be re-established, rates of exchange reduced, and Europe turned to the pursuits of peace rather than war. This is a pre-requisite to the promotion of international and individual confidence.

ALLIES

Austria, Turkey, Russia, Mexico, Germany and the United States are the six nations that have not joined the League. How do you like our allies?

REDUCING TAXES AND REMOVING WAR RESTRICTIONS

The Republicans never tire of talking about the high taxes and the continuance of the war restrictions and they charge it all to the Wilson administration. Notwithstanding the fact that the present Congress is Republican in both branches, and was elected two years ago under the express pledge to reduce taxation and remove the war restrictions, it has forgotten all its pledges and promises and played politics to the exclusion of everything else. This Congress has had the power to do all these things and under our constitution there is no other power or authority to do them. There is only one way to remove burdensome taxes or other drastic laws and that is by repeal. Nobody denies that the great war-revenue laws were hastily drawn and enacted in an emergency. Experience soon proved that while these measures were permissible in war, they were intolerable in peace. This Congress has made no attempt to revise or readjust taxation. They have failed at every point. Not one tax burden has been removed. The truth is that the 66th Congress, Republican in both branches, has made no effort to govern the country. It has refused to make peace, thereby keeping alive many drastic war laws and it has deliberately retained war taxes, declining even to correct demonstrated errors and injustice. There never was a more glaring betrayal of public duty, purposely entered to create discontent and to exasperate the people into the election of a Republican President.

AMBIGUITY

Senator Harding in an address from his front porch the other day, urging the people to reject the League of Nations Covenant, said that "we were led into the Civil War by a mere ambiguity in the Federal Constitution" and then asks "how can we consent to enter into a new world compact with a dozen ambiguities in it." If the Senator's logic is sound our "founding fathers" ought not to have accepted the constitution and the Civil War was the price we paid for the mistake. But will Senator Harding or any of his followers dare to say that it was a mistake to ratify and accept the constitution of the United States? The ambiguity to which the Senator referred was the failure to say whether or not the states entering into the union had the right to withdraw or to secede. But who will say is wrong to enter it in the first place? That failure did in fact lead us into the Civil War. When Mr. Wilson returned from Paris in March a year ago, to submit the first draft of the League Covenant to the Senators for their advice, it was Mr. Root who suggested an amendment to cover this point, giving any nation the right of withdrawal upon six years notice. Mr. Wilson had this amendment incorporated into the final draft, and still further amended so as to give any nation the right of withdrawal within two years. This is the only ambiguity to which Senator Harding called attention, and the League Covenant shows on its face that it contains no such ambiguity although the American Constitution did.

EFFICIENCY OF ILLINOIS FARMS COMPARED

Corn Harvester in Operation—Where Conditions Are Favorable the Corn Binder Increases Efficiency of Man Labor About 50 Per Cent.

(Prepared by the United States Department of Agriculture.)

The relative efficiency of plows of different sizes, the value of the tractor compared with horses, the saving effected by corn binders, hay loaders, and numerous other implements, and other facts bearing on farm management are discussed by specialists of the office of farm management, in a bulletin recently issued. The publication discusses in detail the standard day's work in central Illinois; that is, the amount of work that the 600 farmers included in the investigation ordinarily do in that part of the work day devoted to a given farm operation, such as the number of acres plowed with a given equipment. In some instances the rate of work is given in the bulletin in number of minutes per acre, as in loading and unloading hay, or hauling and spreading manure.

From the figures published one may get a good idea of the rate at which different farm operations are done in the parts of the corn belt in question. For example, it is shown that one man does from 70 to 80 per cent more work with the 28-inch horse-drawn gang plow than with the one-bottom 16-inch plow. Figures are given for spring and fall plowing, harrowing, planting, cultivating, harvesting, husking, seeding, unloading ear corn, unloading oats, loading and unloading hay, and hauling and spreading manure. The bulletin is entitled "The Standard Day's Work in Central Illinois." Copies may be had by addressing the United States department of agriculture, Washington, D. C.

The farms represented by this inquiry are fairly typical of those throughout the middle western states, since the average crop area is 167.4 acres and an average of 32.1 acres is never planted to crops. Corn is the principal product, at least one-half of the crop area being devoted to it, and the oat crop is second in importance. The ground cultivated in most instances is level, and so represents easier working conditions than rolling or rugged country.

The average time spent in the field, exclusive of the time used in going to and returning from the field, at morning, noon, and night, is reported by these men as ten hours and ten minutes per day devoted to spring field work and corn cultivation; nine hours and 55 minutes for haying and grain harvesting; nine hours and 30 minutes for fall plowing and preparing ground; and nine hours and 20 minutes for corn harvest.

Important Facts Emphasized. Among the significant facts brought out by this inquiry may be mentioned the following:

Under conditions where the use of a two-row corn cultivator is practicable, this machine enables one man on these farms to cover nearly twice as much ground per day as with a one-row cultivator. Three horses are most commonly used on the two-row cultivator and the addition of a fourth horse apparently increases but little the amount of ground covered per day.

These farmers find that the use of a corn binder increases the efficiency of man labor 50 per cent over that achieved when cutting and stacking by hand.

Eighty bushels was an average day's work on these farms for one man when husking corn from the standing stalk by hand.

The use of a portable elevator reduces the time required to unload grain into the bin by about 75 per cent.

The use of a hay loader reduces by about 25 per cent the time required to put on a load of hay. The amount of labor required for unloading into the mow is only a little more than half as great when a hayfork is used as when the work is done by hand.

The men in this territory who use mowers spreaders haul and mow a given amount of manure in less than half the time required by men who haul in wagons and spread by hand.

A large majority of the men reporting broadcast their small grain, using endgate seeders attached to the box of an ordinary wagon. Only about 25 per cent of the farmers reporting own grain drills.

The bulletin analyzes each field operation from the standpoint of man-labor requirements, horse-labor requirements, size of machine, etc. The manner in which the data on plowing have been summarized is typical of the way in which several subjects are treated. About 90 per cent of the farmers reported the use of sulky plows, about 80 per cent stated that they use horse-drawn gang plows and 14 per cent reported the use of tractors for plowing.

16-Inch Sulky Plows Popular. A large majority of the farmers use 16-inch sulky plows, nearly all of them with three horses in the spring. Three acres is an average day's work for this outfit. For the comparatively few farmers using 14-inch sulky plows with three horses in spring, plowing about three acres is an average day's work. While theoretically the 16-inch plow should cover about 25 per cent more ground in the same length of time.

time, this apparently has not been found true in practice.

Four-Horse Teams Preferred. The greater number of four-horse teams and even some five-horse teams on 14-inch sulky plows for fall plowing is accounted for by the fact that plowing in the fall is usually about one inch deeper than in the spring, and also by the fact that the ground is generally dry and hard to turn. On an average, outfits of the same size cover about a half acre less per day in the fall than in the spring, due not only to the more difficult conditions mentioned above, but also to the fact that the time spent in the field is about two-thirds of an hour less per day in the fall.

As is the case in spring plowing, the 14-inch plow seems to cover practically as much ground per day as the 16-inch size, provided both are drawn by the same number of horses. The addition of the fourth horse increases the efficiency of the unit by about 10 per cent and the addition of the fifth horse to the 16-inch plow results in a similar increase. Excepting under favorable conditions, a sulky plow seems to be somewhat of an overload for three horses of the size and type used on these farms.

Many Gang Plows Used. Over 450 men reported using horse-drawn gang plows on their farms. About 80 per cent of these plows have 14-inch bottoms. Most of the remaining plows have 12-inch bottoms. Some plows with 13-inch bottoms were reported, but the number was so small that no figures on their performance are given. Over three-fourths of the men who use gang plows also reported the use of sulky plows.

A comparison of an average day's work for 16-inch sulky plows and 28-inch gang plows shows that so far as horse labor is concerned the gang plow drawn by four horses is the most efficient unit in both spring and fall. In the spring this outfit covers one and a quarter acres per day per horse, while both the sulky plow drawn by three horses and the gang plow drawn by five horses cover one acre per day per horse. The gang plow drawn by six horses covers but nine-tenths of an acre per horse.

In the fall four horses with the gang plow cover 1.02 acres per horse, while three horses on the sulky plow and five horses on the gang plow cover .80 acre and .91 acre per horse, respectively. Four horses on the 16-inch sulky plow and six horses on the gang plow cover .72 and .78 acre per horse, respectively. However, the gang is evidently a heavy load for four horses in the fall, excepting under favorable conditions. The 28-inch gang plow is a somewhat heavier load for six horses, the most popular-sized team used in the fall, than is the 16-inch sulky for four horses, but is a lighter load than the 16-inch sulky for three horses.

As far as man labor is concerned, the gang plow drawn by six horses is, of course, the most efficient unit both in the spring and fall, but when horse labor as well as man labor is considered, it is seen that the advantage of this largest unit is somewhat lessened.

TIMOTHY HAY IS NUTRITIOUS

Contains About Three Times as Much Digestible Nutrients as There Is in Corn Silage.

In 100 pounds of timothy hay there are 48.8 pounds of digestible nutrients, or nearly three times as much as there is in corn silage. Corn silage, being a succulent feed and more palatable, on the whole, more easily digested. Specialists have calculated that one ton of timothy hay is equivalent to about two and a half tons of corn silage, says Howard's Dairyman. Putting it in another way, when timothy hay is worth \$10 a ton, corn silage is worth \$4.

Best Potato Soils.

Potatoes do best on loose soils, well supplied with plant food. Clover or alfalfa makes a very desirable location, and ample amount of manure or other fertilizer should be supplied.

Demand for Poultry Products.

The more good chickens and well-flavored eggs the market absorbs, the more good chickens and well-flavored eggs will be in demand.

Ponies Are Favored.

Farmers' ponies are recommended by the United States department of agriculture as strengtheners of co-operation.

Know Your Dairy Herd.

Testing your cows enables you to know your herd. "By their works shall ye know them" and you may slaughter accordingly.

Big Poultry Factors.

Illness and the destruction of flocks are the result of neglect.

VOLCANOES AWAKE TO LIFE

Mount Katmai, in Alaska, Especially, Shows Signs of Preparation for Destructive Outburst.

Affording an awe-compelling spectacle of nature in a sullen mood and awakening memories of the ghastly details of the eruption of eight years ago, Mount Katmai, most powerful and restless of North American volcanoes, is again in violent activity, according to Capt. Charles A. Glascock and Purser Gary Bach of the steamer Admiral Watson, which reached port recently from southwestern Alaska, says the Seattle Post-Intelligencer.

A sable pile of smoke from the funnel of the belching crater broods over the northern sky for a radius of 40 or 50 miles by day, while fretful tongues of flame can be seen by vessels a score of miles at sea at night, according to the Seattle mariners.

Knight's peak, a neighboring volcano, has also been stirred to spectacular efforts by the outburst of its more deadly companion, and wreaths of smoke hang over numerous peaks of the rugged Alaska peninsula.

A slight earthquake shock was experienced at Kodiak island the night of April 8, a day before the arrival of the Admiral Watson. Two days later those on the Admiral Watson had a rare view of the volcano.

Submarine Radio.

The last annual report of the bureau of standards states that members of the bureau's staff have developed very successful methods of communicating with submerged submarines by radio-telephony. With a single-turn coil or loop attached to the outside of the submarine, signals can be received as well when the vessel is submerged as when it is at the surface. It is also possible to transmit from a submerged submarine a distance of 12 miles. This it becomes possible for a ship and a submarine to exchange recognition signals. A coil aerial in a satisfactory direction finder when submerged and readily receives signals transmitted thousands of miles. Just the same as when used in the air. The navy has equipped its larger submarines with this apparatus.—Scientific American.

Airmen Guide Cavalry.

While the Fourteenth cavalry was on the march recently from Fort Sam Houston, Tex., to Fort Ringgold, Tex., an aviator, who chanced to pass over their heads, acted as their volunteer guide.

The observer in the airplane saw that, instead of the Rio City road, they were following what is known as the Somerset road. He advised them of their error by a message dropped in front of the marching column. The aviator officers reported the incident to the chief of operations at Kelly field upon their arrival, and 25 minutes later a map showing the route to their destination, Fort Ringgold, was dropped in the middle of the marching column.

Mohammedan New Year.

The Mohammedan marks the beginning of the Muslim year, but the date is movable, and determined by the moon. It chiefly commemorates the death of the martyrs. All the prophet's son-in-law, Hussein, his grandson (poisoned by his wife), and Hossain, the younger brother, killed at Kerbela.

Snow Leopard Rare Animal.

The snow leopard, the greatest prize of big game hunters in India, is rarely found below a height of 11,000 feet and is even there extremely rare. It is both wild and savage and the natives have a superstitious fear of its white coat and deep-green eyes.

"Flower of the Devil."

"Flower of the Devil" is a strange growth upon trees found on the sides of Fuego volcano in Guatemala, one of the few places in the world where it is known to occur. It has beautiful foliage, velvety and stem and appears full-blown when just unfolding from the bud. This effect is formed by a parasite which enters the wood and dies after eating portions of it away, a process which in time produces the results described. Tradition, however, ascribes a different origin. Years ago, when the Spaniards ruled the country, a fair Indian maiden was supposed to have betrayed certain tribal secrets to her white lover. Her people threw her into the fiery water of Fuego in expiation of her sin, and once every year, on Midsummer's day, she appears to throw armfuls of the devil's flowers over the mountain's slopes—a solemn warning to all of the sanctity of tribal secrets.

Woodpecker a "Home Bird."

Among the natural guardians of the trees are the woodpeckers, which gather their food as they creep round the trunks and branches. As the food of the woodpecker is nearly as abundant in winter as in summer, they are seldom migratory. They never forage in flocks, like some of the granivorous birds whose food is more plentiful, but scatter out over wide areas, and thus better their fare. They bear the same relation to other birds that take their food from trees as snipes and woodcocks bear to thrushes and quails—that is, they bore into the wood as the snipe bores into the earth, while thrushes and quails seek their sustenance on the surface of the ground.

"Devil's Darning Needle."

The darning needle, or devil's darning needle, is one of the names given to the dragon fly, which belongs to the order Odonata. Other popular names for this insect are "snake feeders," "snake doctors," "horse stingers," "flying adders," etc., though dragon flies are harmless, as well as useful in killing mosquitoes and little flies. Young dragon flies and the young of other insects, such as many flies, while in the intermediate stage between the eggs and the mature insect, live in water and are called "nymphs." Many of them live for a year in this stage in ponds before transforming into adult dragon flies.

Knows All the News.

"Those people never read a newspaper from one year's end to the other."

"That doesn't matter; they've engaged a rascal who's lived in about every other family on the block."

Peculiar "Cradles."

An infant in Guinea is usually buried in sand up to its waist whenever the mother is busy, and this is the only cradle it ever knows. The little Lapp, on the other hand, fares most luxuriously in his mother's shoe. These Lapp shoes are big affairs of skin stuffed with soft moss and can be hung on a peg or tree branch safely out of the way. The Chinese baby is tied to the back of an older child, who goes about its play quite ignoring its burden.

Another Paradox.

A painful mistake is reported from North London. It appears that a young lady who went to a fancy dress ball as "The Silent Wife" was awarded the first prize for her clever impersonation of a telephone girl.—Punch, London.

The Wife's Birthday.

As a general thing, after a woman has been married a few years she cries when her husband forgets her birthday and roars when he advertises it.—Dallas News.

Parisian Mementoes of Napoleon.

The statue of Henri of Navarre on the Pont Neuf, the oldest bridge in Paris, is a memento of Napoleon, for it was cast from the bronze of the emperor's statue which was torn from the top of the Vendome column in 1814. This column was erected to honor the victories of the great soldier, his martial deeds being depicted in a spiral strip which covers the surface of the pillar. His figure, in the robes of a Roman emperor, has since been placed at the top. The Exchange bridge was erected by Napoleon and still bears his monogram, the arches. The famous colonnades of the Louvre district are his work. He designed them in memory of his native Corsica, where that type of architecture is common.

Overcoming Insomnia.

The treatment of insomnia or sleeplessness is a simple matter. Psychoanalysis or a physical examination discloses the real source of the disorder. Insomnia has its foundation in loss of general health, worries, bad habits, need of ventilation and sunlight. Retire early at night, even if you cannot sleep. This restores the normal habit. Take a glassful of hot milk, a few crackers and a hot bath before you retire. A cold pack to the head and a hot water bottle to the feet help to soothe the sufferer back into the land of Nod and a good eight hours of sleep.

Diamond Thieves Easily Detected.

Diamond stealing in the South African mines is becoming precarious business. The blacks still swallow them or hide them in self-inflicted wounds, but these methods no longer suffice. Coolidge X-ray tubes are so mounted in a frame as to illuminate the whole body of the striped native standing before them. The entire body of the hundreds of miners can thus be brought into view in the fluorescent light in a few seconds, and any diamond present, even if behind thick bones, is quickly detected. The glow of the diamond under the X-rays, as well as its dense opaqueness, aids in detection. It is said.

Flying Casualties.

Revised figures from the war department show that there were but 583 casualties among American aviators in Europe during the war. Of this number 491 were among aviators with the A. E. F. and the remainder among aviators on duty with the British, French and Italian armies. The casualties are classified as follows: Killed in combat, 298; prisoners, 145; wounded in action, 198; killed in action; 41; missing in action, 29; injured in action, 25; interned, 3.

Church's History.

With much diversity of opinion on minor points, there is a general agreement in dividing the history of the church into three great periods. The first, from the birth of Christ to the time of Constantine; the second from that epoch to the Reformation, and third, from the Reformation to the present time.

War Cut Price of Diamonds.

In 1870, during the Franco-Prussian war, the value of diamonds was largely depreciated by the quantity offered for sale in London by French refugees.

Glorious Revenge.

Brother had gone to a basketball game and left little sister at home, very much to her disapproval. She began at once to lay plans for revenge, saying: "Mother, I know what I'll do. I'll just go with you to the dentist tomorrow and have a tooth pulled. I'll fix him and won't be sorry!"

"But, Believe Me, We Are Not as Poor as Most of Our Rich Neighbors."

A MOTHER'S LETTER, in New York Telegram.

You girls may think you are poor (I'm sorry you can't have those new coats you want, particularly since you've never complained), but you are rich, rich, compared to millionaire Brown's daughter, who was recently married and lives in the next block. She's a sweet girl, too, if she'd ever had anything to bring out what there is in her, but she's always been pampered and now she is pining for this thing and that—always the thing she hasn't or something some one else has done that she hasn't.

Girls, I know we're poor, in a sense, but, believe me, we are not as poor as most of our rich neighbors. Think what genuine pleasure any of us feel when we receive an unexpected gift; an unexpected pleasure jaunt, and, my! what capacity for enjoyment we all possess.

There was a time in my life when I rebelled because I knew that I could not do for you children what some of my friends were doing for theirs. I believe we have the best of it now. I firmly believe you will be happier and better women for the fact that the cost has always had to be seriously considered.

Love and Fighting Are the Concave and Convex Sides of the Same Thing.

By DEAN C. R. BROWN, Yale Divinity School.

I have long been a prize fight fan. I have never actually seen a pugilistic encounter. I am free to confess that I have been interested in the sport ever since the days of Sullivan and Kilrain.

Whenever there is a big pugilistic encounter I read the account of it the next morning with genuine interest, for I believe the man who denies the natural lure of a spirited conflict, whether between two men or two companies of men or two great armies, is in some manner lacking.

The spirit of love and the fighting instinct are the concave and convex sides of the same thing.

There is nothing soft or spineless in true Christianity, for Christian wrath is wrath with a moral basis and that is the kind we should exercise. The evils of this world never will be overcome with less than a stiff and aggressive fight and the fighting spirit has its value in that obvious fact.

Where red blood courses there is always the instinct to fight well; it is inherent. A good fight therefore interests me.

Grave Danger of America Is Its Irresponsible, Undisciplined Youth.

By MAJ. GEN. CLARENCE R. EDWARDS, U. S. A.

One of the gravest dangers menacing the country today is its irresponsible, undisciplined youth.

I believe I have a panacea for it. In fact, I know I have. There must be universal training for citizenship, the object to be the benefit of the individual. Their standard would be of manhood; the peace standard of the dollar would be eliminated.

What are the essential characteristics of a good American citizen? And body and a sound mind, an appreciation of the dignity of labor, the happiness of industry; mastery and control of self; appreciation of the benefits of our institutions and our obligations to them, and the love of one's fellow man.

And navy should be made great schools for men and manhood, the employment of the best elements, with the elimination of all unsuitable for the training of our youth.

Our High School, English Editor—The followers of this cult (free abolition of all law and order; each goes gayly on his merry way) whatever he pleases, no matter how crude, or banal, or foolish; lines any and every length, unlimited full; just what is in the brain—and what a state of brain

John Q. Tilson of Connecticut—We of this day and age are faithful servants if without an earnest effort to drift back into the same old foot's

SAY, you'll have a streak of smokeluck that'll put pep-in-your-smokemotor, all right, if you'll ring-in with a jimmy pipe or cigarette papers and nail some Prince Albert for packing!

Just between ourselves, you never will wise-up to high-spot-smoke-joy until you can call a pipe by its first name, then, to hit the peak-of-pleasure you land square on that two-fisted-man-tobacco, Prince Albert!

Well, sir, you'll be so all-fired happy you'll want to get a photograph of yourself breezing up the pike with your smokethrottle wide open! Talk about smoke-sport! Quality makes Prince Albert so appealing all along the smoke line. Men who never before could smoke a pipe and men who've smoked pipes for years all testify to the delight it hands out! P. A. can't bite or parch! Both are cut out by our exclusive patented process!

Right now while the going's good you get out your old jimmy pipe or the papers and land on some P. A. for what ails your particular smokesappetite!

R. J. Reynolds Tobacco Company, Winston-Salem, N. C.

I SUFFERED THREE YEARS Finally Was Restored to Health by Lydia E. Pinkham's Vegetable Compound.

Lowell, Mass.—"I was all run down and had an awful pain in my right side, was persistently constipated and had very dizzy spells. I suffered for three years and was perfectly miserable until a friend was telling me to try Lydia E. Pinkham's Vegetable Compound and I found it a wonderful medicine. I can now do twice as much work and I recommend the Vegetable Compound to other women. You can use these facts as a testimonial."—Mrs. M. THEALL, HENNEY, 136 Appleton Street, Lowell, Mass.

Why women will continue to suffer so long is more than we can understand, when they can find health in Lydia E. Pinkham's Vegetable Compound. For forty years it has been the standard remedy for female ills, and has restored the health of thousands of women who have been troubled with such ailments as displacements, inflammation, ulceration, irregularities, etc.

If you want special advice write to Lydia E. Pinkham Medicine Co. (confidential) Lynn, Mass. Your letter will be opened, read and answered by a woman and held in strict confidence.

BEWARE!

That case of malaria may become chronic. Many people think they are free from it, and attribute their low state of health to various other reasons. The chronic effects are Anemia, yellow skin, enlargement of the spleen and liver, together with a general low state of health.

Stop trying to cure the effects. Get rid of the cause by taking Oxidine, a preparation that drives malaria out of your blood. It is also an excellent tonic, and will make your system strong enough to resist any further effects from this dreadful disease.

The Bakers Drug Co.,
Waco, Texas.

Bad Stomach Sends Her to Bed for 10 Months Eatonio Gets Her Up!

"Over a year ago," says Mrs. Doris Williams, "I took to bed and for 10 months did not think I would live. Eatonio helped me so much I am now up and able to work. I recommend it highly for stomach troubles. Eatonio helps people to get well by taking up and carrying out the excess acidity and gases that put the stomach out of order. If you have indigestion, heartburn, belching, food repeating, or other stomach distress, take an Eatonio after each meal. Big box costs only a trifle with your druggist's guarantee."

A Treat in Store.
"Now, Tommy," said the wife of Billie Hiffkins, "be a good boy while I'm gone and I'll reward you."
"What'll you gimme, ma?" asked the precocious child.
"I'll let you go down to the court-house and hear your father hauled 'Order in court'!"—Birmingham Age-Herald.

"Cold in the Head"
In an acute attack of Nasal Catarrh. Those subject to frequent "colds in the head" will find that the use of HALL'S CATARRH MEDICINE will build up the system, cleanse the blood, and render them less liable to colds. Repeated attacks of Acute Catarrh may lead to Chronic Catarrh.
HALL'S CATARRH MEDICINE is taken internally and acts through the blood on the mucous surfaces of the system, thus reducing the inflammation and restoring normal conditions.
All Druggists. Circulars Free.
F. J. Cheney & Co., Toledo, Ohio.

In Proportion.
"Why, is this your full stock of wedding rings?" the young man asked in surprise. "Only half a dozen—not enough to permit of any choice at all. Odd, when you have a couple of hundred engagement rings there in the case."
"Not odd—experience," the jeweler replied. "I'll take all those diamonds to work off these plain bands."

Cuticura for Pimples.
To remove pimples and blackheads smear them with Cuticura ointment. Wash off in five minutes. Once cured keep your skin clear by using them for daily toilet purposes. Don't fail to include Cuticura Talcum.—Adv.

Couldn't Help Themselves.
Billboard-John's side, this show was just made for the tired business man.
Kritik—I see. The only fellows who stay for the finish are the men who are too tired to get up and walk out.

Dr. Perry's "Dead Shot" is not a "laxative" or "cathartic," but a real old-fashioned dose of medicine which cleans out Worms or Tapeworm with a single dose.—Adv.

Untipped.
Waiter—Here, pardon, sir, your check.

Pacific Coast Forests Last Big Supply

YELLOW PINE
The forests of the Pacific coast states comprise our last great body of coniferous timber and contain practically half of the remaining saw timber in the United States, according to a report on timber depletion made to the United States

Senate by the forest service of the United States department of agriculture. The development of the lumber industry of the region, however, has already progressed far. Within the last year shipments to eastern markets have largely increased, and points formerly supplied by yellow pine have been invaded up to the very boundaries of the yellow-pine-producing territory. Approximately three and one-half times as much timber is being taken from the Pacific coast forests as is produced by growth, while for timber of saw timber size the depletion is nine times the growth.

Large Virgin Stands.
The commercial forest area of the Pacific coast states, the report says, has been reduced to approximately 57,580,000 acres. "A large percentage of this, about 39,370,000 acres, is in virgin stands." Not all of this, however, is accessible high-grade timber, for there is a large percentage of relatively inferior and inaccessible areas. "This is an important factor which is usually overlooked in the consideration of the western timber supply."

Second growth of saw timber size covers about 5,292,000 acres, and smaller second growth of 6,425,000 acres, while non-foresting forests cover 6,500,000 acres.

The present stand of timber is estimated to contain about 1,141,000,000 board feet. Of this amount, Oregon has a total stand of nearly 494,000,000 board feet, Washington has 334,000,000 board feet, and California over 313,000,000 board feet. More than one-half of the total, or about 680,000,000 board feet, occurs in the Douglas fir belt of western Oregon and Washington. Douglas fir comprises approximately 558,000,000 board feet, and of this 505,000,000 board feet, or nearly four-fifths of the remaining saw timber in the United States, is in Washington, and Oregon.

Cut Over Area Large.
Already there is a cut-over area of approximately 6,125,000 acres, the report states. Of this amount about two-thirds is in Washington and Oregon, and a very large percentage is west of the Cascades in the Douglas fir belt. The area burned over annually in the three Pacific coast states is found by the forest service to amount to 450,000 acres, and the loss in timber to about 900,000,000 board feet.

The annual drain on the forests of the Pacific coast states is estimated to be about 11,350,000,000 feet, according to the report. The total annual growth of the forests is equivalent to about 2,100,000,000 board feet. Depletion of the forests, therefore, approximates three and one-half times the growth, while depletion of saw timber is approximately nine times the growth of the same class of material.

One reason for the comparatively small amount of growth is, of course, the fact that very much of the territory is occupied by virgin stands. In spite of the tremendous supplies of timber, in certain localities a large proportion of local timber has been cut and logging operations are being pushed back to the less accessible timber in the rougher mountain regions, the report points out. "The exhaustion of local supplies is a vital matter to local prosperity and development. It means the cessation of a local industry, the abandonment of improvements, rapid depreciation of investments, and other losses which the industry, the community, and the consumer must shoulder."

Being Cut Rapidly.
The timber stand in California is being cut at the rate of about 1,500,000,000 feet annually. "Practically all of the cut, up to the present time, has been in the most accessible stands, whereas a considerable part of the remaining timber is comparatively inaccessible," the report says. "Logging operations are removing annually a little less than 2 per cent of western Washington's and less than 1 per cent of western Oregon's timber. Yet the reasonably accessible timber and that in private ownership is going very much faster; and, with decreasing southern pine production, enormous pressure to increase the cut may be expected."

As an example, the situation in Gray's Harbor county is cited: "About 20 years ago there were in this county 750,000 acres of timber and only about 75,000 acres of cuttings. Now there are 355,000 acres of stumps. One-sixteenth of the county's private timber land is being cut over annually. In 25 years the supply of privately owned virgin timber will be gone."

It has been found that in western Washington about 85,000 acres annually, and in eastern Washington 30,000 acres annually were cut over from 1909 to 1919. All things considered, it is expected by an authority on the lumber supplies of Washington that the privately-owned virgin timber supply of the state will be virtually gone in 20 years unless forest policies are changed.

Local Consumption a Factor.
Forest depletion in Washington has proceeded much further than in Oregon, the report says; and while an expansion of the industry in Washington under the increased demands from eastern markets may reasonably be expected, by far the greater part of the expansion may be looked for in Oregon. "The reason for the slower development in Oregon lies in the inaccessibility of its Douglas fir stands. Many operations now being seriously considered for Oregon will require transportation and other investments running into the millions of dollars before any timber can be taken."

Local consumption must be taken into account in considering the depletion of the Pacific coast forests.

As placed in the frames of the bee-hive, and being already laid out with suitable foundations for the cells, they relieve the bees of just that much work, the industrious insects having only to build up the walls to such extent as the spacing of the frames permits.

A new idea, said to have proved entirely successful, is that of making the foundation sheets of aluminum instead of beeswax. When the metal has been brushed lightly with melted wax it serves the purpose just as well, the bees being quite content to build upon it. The advantage of the aluminum sheets is that they are not fragile.

Safety First.
Preparatory to showing Charlie his new sister, his father said, "What do you say to getting a new baby at our house, sonny?" Charlie thought a moment and then said, "We'd better be careful, daddy; let's just rent one till we see how we like it, for Billy (Charlie's chum) says he is tired of his; it yells all the time."

At once the feeling of importance returned and, in bluish tones, scolding a man of some value, he replied: "I am, madam. What can I do for you?" His chagrin was indescribable when she replied: "Can you tell me how much it will cost to send a big pig and her little pigs to the next station?"—Unidentified.

Gasoline Substitute.
"Motor alcohol," a substitute for gasoline, made from molasses on the Hawaiian sugar plantations, which has been allowed to run to waste or burned for the recovery of petrol, is a new automobile fuel which it is said gives more power, greater mileage, easier starting, and more freedom from vibration than gasoline. Hawaii has enough available to produce 100,000 gallons of "motor alcohol" for all the automobiles on the islands.

OVER THE CLOUDS

There Majesty of Aerial Perspective Can Be Realized.

Writer Describes His Observations on an Airplane Trip—View Not to Be Compared With That at Sea Level.

The full majesty of the aerial perspective can only be realized, writes Edward P. Warner in the Yale Review, when one is above the clouds and the earth is shut off from view. In flying on an overcast day, when heavy banks of cumulus clouds lie at about 3,000 feet, it is possible to experience within a minute or two every degree of fog and sunshine.

When one is passing into the clouds the lower surfaces of which are almost perfectly flat, there is an instantaneous transition from shadow to complete atmospheric opacity, similar in appearance to a dense fog at the ground but differing somewhat from it in feeling, for the interior of a cloud seems to be "drier," the air less saturated with water vapor, than the fogs which are met with at sea or ashore. If the climb be continued a few hundred feet farther, the airplane passes again into clear air, but into air now of clarity and brightness worthy of Mediterranean skies and not at all to be compared with that at sea level.

Above lies an almost cloudless sky, a sky the perfection of whose azure tints makes one long for the brush and the skill of Maxfield Parrish to make permanent record where memory quickly fades and where photography cannot even suggest. Below, ahead, and all round, are the cumulus clouds, but they present a very different aspect from that seen from the ground. The lower surfaces are flat and uninteresting, but the upper parts are like colossal billows which are constantly changing, rolling, eddying, whipping to pieces, and forming again. The lower surfaces lie in shadow—a fact which often gives to the most innocent and fleecy of clouds the threatening black appearance of "thunder heads," but the upper surfaces are just enough shaded in spots by the unevenness of contour to afford relief, so that they are not utterly dazzling.

The clouds are so sharply defined against the sky, so opaque, that it is as difficult to believe that they consist of yielding vapor as it is for most people to believe in the reality of the ghosts of the traditional ghost stories—beings who retain all their earthly appearance and habiliments yet have no substance to resist a thrust or blow. A novice in flying is likely to draw himself together and brace himself in his seat almost involuntarily in anticipation of the impact as the airplane dives at 150 feet a second toward the white mass ahead, a mass which seems at least as solid as a snowdrift. There is no impact, no hesitation when the cloud is reached, but the passenger suddenly realizes that he can no longer see the blue above, that he cannot even see the wing tips of the airplane, though he knows that in a few seconds he will return to the conditions of the ground dwellers, so far as their view of the sky is concerned.

Short Candle Burned Out.
Mannie Chappelle (Emmanuel S.), a generation ago was a shining figure on Broadway who exemplified the art of joy living. He was agent for a brand of champagne which he distributed freely at dinners which he gave in order to introduce people to it. They had to be people of wealth and social standing to make it worth while for him. He earned big money, spent it freely, had a great gift of companionship, which constituted his chief equipment for his business, was immensely popular with the kind of people whose trade was desirable, and used to boast that for years at a time he never saw the sun. Daylight in New York wasn't worth while. Nothing happened. His wife was Billie Burke's sister. She divorced him. He has just died, at the age of 67½. No man had more good times in his life than he. We wonder if he was as happy as he made other people, and doubt it. Prohibition knocked out his business. He found nothing else worth living for.—Waterbury American.

Domestic Tragedy.
"Henrietta," said Mr. Mewton, "you never ask me to water the rubber tree or put the cat out any more."
"It has been attended to, Leonidas."
"And you don't mind how many cigarettes I smoke nor how late I stay out at night."
"I consider you able to take care of yourself."
"Henrietta, many a home has been wrecked because of ambition and business preoccupation. You have grown to be so interested in woman suffrage I don't believe you care what becomes of me!"

The Graveyard Blues.
The cold morning in midwinter a negro employed in a southern lumber mill came to work wearing a pair of tennis shoes. He offered no explanation for his strange footwear—perhaps he hadn't any. The white, thin shoes did not fail to attract the attention of his fellow workers, however. One of them greeted him with this remark: "Nigger, what's you doin' comin' to work wid dem tennis shoes on cold as it is. Ain't you got no judgment? Better go on home and get somethin' on yo' feet befo' dem things gives yo' feet de graveyard blues."

Hopelessly Out of Fashion.
Despite his shabby clothing and empty pockets, it was evident that he had seen better days.
A sympathetic soul began to chat with him, anxious to hear his story. Over a cup of cocoa he told his tale.
"Yes," he said, "I've been quite a personage in my time; in fact, the cynosure of all eyes."
His auditor waited in silence for an explanation.
"I was the tattooed man in the circus," he went on.
"And how did you lose your job?" he was asked.
"Public went crazy on moving pictures," he said, "and mine wouldn't budge!"

Many a man has drowned his self-respect in whisky.

Great Britain had 31,000 horsemen in the wars with Napoleon.

The Itching and Sting

of Blazing, Fiery Eczema

Seems Like the Skin is on Fire.

There is a harassing discomfort caused by Eczema that becomes a torture. The itching is almost unbearable, and the skin seems on fire with the burning irritation. A cure from local applications of salves and ointments is impossible, because such treatment can only allay the pain temporarily. The disease can only be reached by going deep down to its source.

The source of Eczema is in the blood, the disease being caused by an infection which breaks out through the skin. That is why the most satisfactory treatment for all so-called skin diseases is S. S. S., for this remedy so thoroughly cleanses the blood that no impurities can remain. Get a bottle today, and you will see results from the right treatment. S. S. S. is an excellent system cleanser; it is not sold or recommended for Venereal Diseases. Write for advice. Address: Medical Director, 110 Swift Laboratory, Atlanta, Ga.

WINTERSMITH'S CHILL TONIC

If Not Sold by Your Druggist, Write ARTHUR PETER & CO., Louisville, Ky.

MADE HIS POSITION PLAIN

Visitor Bound to Notify Big Game Hunter That He Would Not Accompany Him.

He was a big-game hunter and he had inserted an advertisement in a morning paper asking if any man would accompany him to central Africa to shoot lions, rhinos, hippos, etc., the said companion to bear half the cost of the expedition.

Late that night or, rather at two o'clock the next morning, his household was awakened by a violent ringing of the front-door bell and a man was admitted who, to put it mildly, appeared to have been winning.

"Look here," explained the visitor, "I read your 'verisimilitude this mornin' and I was bound to come to you."
"Well," queried the hunter, "it's a bit late to talk business, but will you accompany me?"
"Company you?" retorted the visitor. "No, shir. I called to tell you I'd shree you hanged first."

Useful Purpose.
"Do you enjoy those peppery Mexican dishes?"
"I won't exactly say I enjoy them," replied Cactus Joe. "But I have an idea the pepper is valuable. It puts a pain in that disguises the taste."

Most human troubles can be solved through education.

Washington's Millionaire Colony.

Washington is becoming a community of millionaires. According to estimates made from income tax returns—the basis being an income of \$50,000 or more a year—the District of Columbia contains no fewer than 150 persons worth one million dollars or more. From season to season the number of wealthy Americans who settle in the national capital, mainly attracted by its social opportunities, is perceptibly growing.

Fascination of Mendacity.
"Ever read Aesop's fables?"
"You mean the stories in which the animals are supposed to talk?" asked Senator Sorghum.

"The same."
"Yes, I've read 'em. Aesop was a smart man. He realized it was almost impossible to interest the public in a simple statement of honest truth without mixing it in with some gilded and fantastical whopper."

Easy Come—Easy Go.

FORD

The Universal Car

REDUCTION IN PRICES OF FORD PRODUCTS

War prices must go. Effective at once, Ford Cars, Trucks and Tractors will be sold f. o. b. Detroit at the following prices:

Touring, with starter	\$510.00
Touring, without starter	\$440.00
Runabout, with starter	\$465.00
Runabout, without starter	\$395.00
Coupe, with starter	\$745.00
Sedan, with starter	\$795.00
Truck, one ton worm drive with pneumatic tires	\$545.00
Fordson Tractor	\$790.00

Henry Ford says "The war is over and it is time war prices were over. There is no sense or wisdom in trying to maintain an artificial standard of values. For the best interests of all it is time a real practical effort was made to bring business of the country and the life of the country down to regular pre-war standard."

AT YOUR COMMAND WITH REGULAR FORD EFFICIENCY in Service and Eagerness to fill your orders

WILL BE

DE LAVAL SERVICE DAY

For the benefit of our many customers and users of De Laval Cream Separators we have established a De Laval Service Day.

On this day we shall be glad to have any De Laval user bring his complete separator to our store for a thorough and careful inspection and adjustment, which will be made free of charge. Should any part, due to unusual wear or accident, need to be replaced, this will be done, the only charge being for the price of the new parts used. No charge will be made for the service.

Both a De Laval Service expert and a representative will be with us to assist with this work. Bring in your De Laval Separator that day and receive the benefit of their advice on the care and operation of the machine, as well as the free service. It is our wish, and that of the De Laval Company, that every user of a De Laval Separator get the maximum of service at the minimum of cost, and we therefore urge you to avail yourself of this free and useful service.

SUBSCRIPTION RATES
\$2.00 per year cash in advance

OUR POLITICAL ARTICLES

For the past few issues the Press has been running a few columns of articles furnished us by the State Campaign Committees of both parties. They are run by us so that our readers may get the views of the leaders of both the great parties, thus enabling them to vote more intelligently by knowing both sides of the question.

With this end in view we have gone further in this service to our readers and opened our columns to the local committees of the two major parties so that you may be more fully informed.

These articles in no way are intended to voice the sentiments of The Crittenden Press. The paper feels that owing to the fact that it is the only paper in the county and has many readers of different political faiths, that it is only due them that the paper be non-partisan.

RAILROAD EFFICIENCY

It is only fair that the railroads of the country be complimented on their increase in efficiency during the past few weeks. That the service is as good as it is right now pays a remarkable tribute to the faithfulness of railroad company employees, handicapped as the companies are with lack of equipment. In complimenting the employees as a whole the local men in charge of the Illinois Central affairs should not be forgotten. It would not be putting it a bit too strong to make the assertion that there is not a station anywhere in the United States where the employees treat the public with a greater degree of courtesy than here in Marion. And though the Press is a pretty good customer of the railroad in number of shipments there has never been a time when a single one of the station employees did not co-operate in every way they possibly could to give us the service desired.

Of course every one knows that all railroads have been unable to finance new equipment to any great extent now for several years and they are now very seriously hindered in looking after the business the way their executives would like to have it looked after. It will probably be several years before they can move freight as quickly as was the custom some eight or ten years ago—but, if the present willingness to serve should last until proper equipment has been secured—and no doubt it will—we predict that this country will see a new era in railroading efficiency and efficient railroad service is one of the most important factors in keeping the country prosperous.

FORDSON

TRADE MARK

Farm Tractor

The Fordson Tractor was made to meet the demands and necessities of the every-day American Farmer. It was made with the thought that it was the necessity of the man of forty acres as well as the man with one thousand acres. It was made not only for plowing, harrowing, discing, drilling, seeding, mowing, reaping, but for all other work on the farm where power is necessary. It was made to bring conveniences to the farmer's home as well as for the cultivation of his fields. It was made to furnish power for the cream separator, silo filling, cutting feed, sawing wood, furnishing power for milking, washing, supplying the house with running water, electric lights, and hundreds of things on the farm. It was made to do all this economically and in a reliable way. It was made to be the big profitable servant on the farm.

And it has not failed in any of the expectations had for it. It has been tested as no other Tractor has been tested. It has been proven reliable and can furnish proofs impossible to any other tractor. It has done these things not only in America but in Europe, Asia, Africa, and in the Islands of the Seas of the civilized world.

Therefore, the Fordson Tractor can meet all the conditions it has met successfully the demands of farmers in every part of your farm. When you buy a Fordson, you are not buying any experiment—you are buying a servant and a money-maker for you that you can depend upon absolutely from the first day you put it to work. It is easy to understand. It possesses all the power you want. It is simple in control. It is more flexible than you imagine. It will help you cultivate every foot of ground you have, and every day in the year you will find use for it on the farm. Its appeal to the farmer is in its dependable service and the wide variety of work it can do.

•We'd like every farmer that reads this, if he hasn't a Fordson Tractor already, to come to us and let us sell him one. Let us demonstrate its powers, its values, on your own farm. Let's get into details—power, reliability, economy. While the sale of a Tractor gives us a small profit, the purchase of a Tractor to the farmer means a money-making servant every day for years. So the sale of a Fordson means more to the purchaser than it does to us. We are arguing for your good, Mr. Farmer. Come in and talk it over. Your time against ours. It is worth it.

And remember, when you buy a Fordson Tractor, we are right here to keep that tractor in reliable running condition every day. You won't have to wait if anything should get out of order. We are right here to keep it right, because one of the conditions of the Fordson Dealer is that he must keep on hand always a complete supply of parts. This is a guarantee we don't believe you can get with any other farm tractor. Come in. Let's talk it over.
