The trees are the number of fish he caught." planted 35 to 40 feet apart, no tree being planted less than 20 feet from corner. The cost is assessed to the property owner. The city specifles the variety to be used on each street, so as to obtain uniformity.

Look After the Trees Now.

Industrial communities are prone to undervalue the products of nature until it is too late. A fine tree is the product of from 20 to 50 years of growth. It cannot be hurried; nature will not hasten her steps at man's wish. No amount of money can specthe development of any tree beyond a certain pace, though money can provide good conditions for growth. To save a tree, therefore, is to save something which only a generation or more can replace.

Model English Towns.

The model industrial town idea, originated some years ago in the United States, is to be applied to a system of industrial garden cities which in time will rim the city of London. # **CULTIVATE CORN** TO HELP YIELD

Thorough, Early Plowing Encour- Dear Friend: ages Plant Growth and Prevents Soil Crusting.

### DESTROYS ALL YOUNG WEEDS letter

Cultivation, Except Where Excessive Rains Have Facked Soil -Maintain Dust Mulch.

maturity corn should be given every growth. If the development of the plants is checked from any cause it may reduce the yield no matter how favorable the later treatment. The most successful corn growers realize the importance of thorough, early cultivation in order to prevent any check "Bottoms of all signs shall be at for that part the handsomest man in in the growth of the plants because of weeds or crusted soil. As a conse he'll be homely quence of heavy minfall, the stalk, the money we are paying out. or of poor color. Thrifty corn plants are thick, strong, and of dark-green

Use Weeder Soon After Planting. Horse weeders and harrows should or kill young weeds that start before lag the corn is up. While the plant is very small, narrow shovels that throw the soil but very little should be used. and fenders are usually desirable to prevent covering the plants.

Experience favors shallow cultiva tion, except if excessive rains have packed the soll, when deep cultivation ill help to dry and aerate the ground. In cultivating it is important to avoid breaking the roots of the plants. If the plants have reached a height of 2 or 3 feet the soil in the middle of the rows should not be cultivated deeper than 4 inches, and sometimes less. For retaining soil moisture a loose soil muich 2 or 3 inches in depth should be maintained

The question is frequently asked

"I don't care whether that story is A Two-Row Wheeled Custivator Dees Effective Work

The answer is that it should be cultivated often enough to keep down weeds and to maintain constantly a loose sell mulch until the corn has attained its growth. A greater number of cultivations will be necessary when rains at intervals of about a week cause the surface soil to run together and crust. This crust must be broken and the soil mulch restored. er evaporation will soon rob the soil of much of its moisture. An essential object of cultivation is to restore the soil mulch as soon after a rain as the condition of the ground will permit If the ground becomes hard and baked dry the crop will suffer greatly and when cultivated the dirt will break up into clods.

Many crops are cut short by stopping the cultivation because the corn is too tall for use of a two-horse culdemands it, shallow cultivation should Sunday continue, even though the corn is tasselling. # To the Voters of Crittenden County:

Sullivan, Kentucky, R. F. D. No. 1, June 21, 1921.

Owing to my home affairs it seems that I am not going to be able to see all the voters regarding my candidacy in the County Judge's race. After I resigned my place as County Road Engineer I moved back to my old home place, Bells Mines, in the northern part of the county and have been busy with my farm work until now. The time is so short between now and the Primary that I may not be able to visit you at your home, so I am writing you this

Now, I have no formal introduction to make of myself because the people of Crittenden Bacon-You're looking fine, old man; Successful Growers Favor Shallow county surely know my ability and my readiness to deal honestly and impartially with the public affairs of the county.

The County Judge is ex-officio chairman of the Fiscal Court of the county. The Fiscal Court fixes all salaries, levies all taxes, etc., besides makes all appropriations for roads and bridges, in Orepared by the United States Departs short, they pay out all moneys that are paid out of the county funds for all purposes. If I From the time of germination to am the County Judge I want to assure the voters and the tax payers of the county that there will be no appropriations of the county's money made until the Fiscal Court has been fully in-"I say, whenever I ate coffee cake opportunity to make a steady, sound formed as to the advisability of such appropriation.

If I am the County Judge I will feel perfectly free to express my opinion or give my advice

In questions connected with the office I will endeavor to inform myself thoroughly and then act fearlessly and unbiased.

Crittenden county is paying a heavy tax. I may not be able to reduce it, but I will bend every effort possible, with the full assistance of the board of Magistrates to get something for

My interest is with the farmer, the laborer and the producer, and I will do every thing in my power to see that he gets his share of the tax money paid, in the way of better roads and bridges, schools, churches or other things where the County Judge may have any influence.

I want to be the County Judge for all the people of the entire county regardless of race,

If you think from what you know of me by my past work as a public officer of the county, be used when needed to break a sur and my qualifications generally that I am the man for the place then I will appreciate your face crust, check insect depredations. support as much as any man could. I will do all I can to not let our dear old county's interests

Yours for a better Crittenden county,

E. JEFFREY TRAVIS

The when he was safe in the wall, "but it eggs of internal parasites pass from Fatty Mouse ran out of the door and many mice living here that the other the pastures become infested. The aid in preventing this.

Damage from parasites is greatest. as a rule, among lambs and young sheep. Hence, it is important to pay special attention to the care and handling of lambs and yearlings. Prompt action to ascertain the cause when sheep become unthrifty will often prevent serious loss.

Parasites of sheep are divided into two general groups, external and internal. Among the former, lice, sheep ticks, and scab mites are the most common. One application of sodium flouride in the form of a powder rubbed into the skin will kill biting lice, but not sucking lice. Both kinds of lice, sheep ticks, and scab mites

Where Pasture is Abundant Sheep Need No Other Feed.

are destroyed by dipping the sheep. For lice and sheep ticks a number of dips are recommended in the bulletin, including coal tar creosote, cresoi, and nicotin, or nicotin and sulphur. For scab mites the official dips are ifme-sulphur and nicotin-sulphur dips. sireep dipping. All places which have been occupied by lousy sheep should be regarded as dangerous from this standpoint for a period of three weeks; if occupied by ticky sheep, as dangerous for two months; if occupied by scubby sheep, as dangerous for a month or two in the case of pastures. and a year or more in the case of buildings. Quarantine measures are Mrs. Nora Nesbitt last week essential in eradicating scab.

The most common internal parasites of sheep include tapeworms, flukes. roundworms, and a few other forms such as maggets causing grub in the head, the tongue-worm and the onecelled protozoa. One of the most common of these is the grub, infestation with which can be largely prevented by smearing the nose of the sheep with a preparation made of equal parts of tar and grease, or tar and fish oil. Other important internal parasites discussed in the bulletin are tapeworms, the gid parasites, hydatid, liver flukes, stomach worms, notular ms, hookworms, and lungworms. Of these, certain tapeworms are faircommon over the entire United States; one tapeworm occurs only in the West; gid is most prevalent in family were guests of Mr. Rufus. Montann; liver flukes are most common in the Gulf states and the Pacific Coast states; stomach worms and lungworms take a heavy toll in sheep in almost every state in the Union, and nodular worms and hookworms are common in the South and East.

#### FULL VALUE OF BUTTERMILK

Particularly Advantageous When Fed in Connection With Corn or Other Feeds.

The greatest or full value of buttermilk and skimmilk for feeding is secured only when fed in connection with other feeds. Buttermilk fed alone to pigs does not give the results it does when fed in connection with corn.

Best Practice With Manure. Hauling manure direct from the barn, and spreading it on the field at once is the best practice in handling manure.

Get Collar to Fit. Get a collar that fits the horse. A good collar costs money but a horse with a sore shoulder will cost mon ey also.

# Illinois Central System Makes an Appeal to Shippers and Consignees

The amount paid out by the railroads on account of loss and damage to freight represents an economic waste burdensome alike to the railroads and the public That this waste is substantial is shown by the following record of the loss and damage payments made by Class I roads:

1	9	1	6								5	23,346,963
1	9	ĺ	7									35,079,757
j	9	l	8									55,852,797
1	9	1	9								- 1	104,507,174
ì	14		n								- 1	04 398 936

The Illinois Central System has borne its share of the economic waste on ac count of loss and damage to freight, as will be seen by examining these figures

1916	\$ 655,293
1917	1077,720
1918	1653,700
1919	2298.250
1920	2745,099

The foregoing figures show how the problem of loss and damage to freight has got out of hand. The Illinois Central System, in common with other railroads, is making a determined effort to reduce this drain upon its revenues. In this we need the painstaking co-operation of shippers and consignees. We, therefore, earnestly request that all shippers and receivers of freight co-operate with us to make this

During May, 1921, 68 percent of the amount paid out for loss and damage to freight on the Illinois Central System was on carload shipments. We request carload shippers to insist upon being provided with cars suitable for the particular kind of freight they desire to ship and to see that shipments are properly braced and stowed in cars to prevent damage by shifting.

We request shippers of less-than-carload freight to comply with the rules and specifications of the Consolidated Classification Committee appointed by the Intersale Commerce Commission by selecting substantial containers in which to pack their goods for shipment, so that packages may not be crushed and contents damaged when loaded into cars with other freight. We request them to mark their packages plainly as to name of consignee and destination, removing all old marks that may appear on packages, and to furnish legible billing orders, so that billing may indicate clearly the name of consignee and destination. We also request them to deliver their goods at freight depots early in the day to avoid hurried loading

The president of a large wholesale house on the kines of the Illinois Central System was told by one of our agents that many packages were being sent back to his house on account of improper packing and addressing. He expressed great surprise and immediately called in his shipping clerk to ask him in the presence of our agent how many packages were beiny returned from the Illinois. Central System daily. The shippiny clerk replied: "I cannot tell you exactly, but a yood many." As a result of this interview, the necessary corrective measures were immediately ap-

We request receivers of freight to observe the character of containers used by shippers and the manner in which goods are packed, crated and marked, particularly when goods are not received in good order, and to make those facts known to the shippers, appealing to them to use good containers on the grount that defective goods and delayed transportation service cause them a loss of trade. We also request receivers of freight to notify our representatives promptly of any concealed loss or damage to their shipments in order that immediate investigation may be made. Some receivers of freight neglect to do this for days and even weeks, after shipments have been received, rendering it difficult for the proper inspection and investigation to be made. This militates against good service,

Our purpose in presenting this problem to our patrons is to enable us to render a better service, by eliminating delay in the delivery of freight in good condition, and to assist in reducing the cost of transportation. By no means do we claim that all of the trouble is due to lack of care on the part of shippers and consignees. We are doing everything within our power to correct abuses for which we are responsible. We are putting forth our best efforts to render a service of satisfaction. By working closely with shippers and receivers of freight, we believe it possible to bring the troublesome question of loss and damage under control, to the great advantage of shippers and receivers of freight, as well as to this railroad. Constructive criticism and suggestions are invited.

> C. H. MARKHAM. President, Illinois Central System.
